

Advanced Google Dorking

Introduction

*Google Dorking, also known as **Google Hacking**, is the use of advanced Google search operators to find specific information that is publicly available on the internet. It helps investigators locate documents, web pages, login portals, APIs, and other indexed resources more efficiently than a normal Google search.*

Importance in OSINT

- *Enables efficient collection of publicly available information.*
- *Helps discover websites, documents, reports, and technical resources.*
- *Assists in investigating organizations, domains, and digital footprints.*
- *Improves the accuracy and speed of information gathering.*
- *Widely used in cybersecurity, digital forensics, and OSINT investigations.*

Advanced Google Search Operators

Operator	Example	Purpose
site:	Site: zoom.us	Search within a website
filetype:	Filetype: pdf	Find PDF files
intitle:	intitle: security	Search page titles
inurl:	inurl: support	Search URLs
intext:	intext: privacy	Search page content
cache:	cache: zoom.us	View cached page
related:	related: zoom.us	Find similar websites
-	-support	Exclude results
*	"Zoom * Companion"	Wildcard search

Chained Google Dorks Used

Google Dork	Purpose
site: zoom.us filetype: pdf intitle: guide	Find official PDF guides
site: zoom.us inurl: support filetype: pdf	Find support documentation
site: zoom.us intitle: security intext: privacy	Find security pages
site: zoom.us inurl: developer "API"	Find API documentation
site: zoom.us "Zoom AI Companion" filetype: pdf	Find AI Companion PDFs
site: zoom.us intitle: "release notes"	Find release notes
site: zoom.us inurl: blog AI	Find AI blogs
site: zoom.us -support filetype: pdf	Exclude support pages
cache: zoom.us	Check cached page
related: zoom.us	Find similar websites

Practical Investigation

Target Company

Zoom Communications

Activities Performed

Website Investigation

- Explored the official Zoom website (zoom.us).

- Reviewed products, services, and website structure.

Advanced Google Dorking

- Used advanced Google Dorks and chained search operators to perform targeted OSINT searches.
- Combined operators such as site:, filetype:, intitle:, and inurl: for precise results.

PDF Search

Query: site: zoom.us filetype: pdf

- Located publicly available user guides, manuals, and technical documentation.

Security Page Search

Query: site: zoom.us intitle: security

- Found the Zoom Trust Center, security policies, compliance information, and privacy resources.

Support Page Search

Query: site: zoom.us inurl: support

- Identified Help Center articles, FAQs, troubleshooting guides, and support documentation.

API Documentation Search

Query: site: zoom.us inurl: developer "API"

- Located REST API documentation, SDKs, authentication guides, and integration resources.

Developer Resource Search

Query: site: zoom.us "developer"

- Found the Zoom Developer Platform, developer tools, SDKs, and technical documentation.

Cached Page Search

Query: cache: zoom.us

- Checked whether Google had a cached version of Zoom web pages for reference.

Related Website Search

Query: related: zoom.us

- Identified websites offering similar communication and collaboration services.

Findings

Observed

- Official website indexed.
- PDF documentation available.
- Developer documentation available.
- Support pages found.
- Security resources available.
- Privacy information available.

Inferred

- Strong public search visibility.
- Well-maintained documentation.
- Transparent security practices.

Conclusion

- The **Google Hacking Database (GHDB)** is a valuable resource that organizes Google Dorks into categories, making OSINT investigations more efficient and systematic.
- GHDB enables investigators to quickly discover publicly available information such as documents, security pages, developer resources, APIs, and support documentation.
- During the practical investigation of **Zoom Communications**, GHDB techniques helped identify official resources while improving the accuracy and efficiency of information gathering.
- Using categorized Google Dorks allows investigators to perform targeted searches and reduce unnecessary search results.
- GHDB should always be used **ethically and legally**, ensuring that only publicly accessible information is collected without attempting unauthorized access or exploitation.
